Forecast for Friday 01 Apr 2022

Weather: Mainly dry. A sunny morning across most of the fells, some cloud in the far east. Patchy cloud bubbles up more widely in the afternoon giving the odd light snow shower, falling as rain or sleet in the valleys. A dry but cloudy evening.

Chance of cloud-free hill tops above 800m: 95%

Low cloud and visibility: Generally good or very good. Cloud bases mainly above the tops, but lowering to 600m in the evening.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Severe wind chill at height early.

Forecast for Saturday 02 Apr 2022

Weather: Good sunny spells mixed between a scattering of light showers, these building for a time during the afternoon, also wintry across higher summits.

Maximum wind: North or northwest 15mph of less.

Chance of cloud-free hill tops above 800m: 95% for any given time, but moderate chance of extended spells due to showery nature of the flow.

Low cloud and visibility: Good or very good, briefly moderate or poor in showers.

Temperature: **Valleys:** Zero Celsius increasing plus 9 Celsius for the afternoon
At 800m: Zero to Minus 2 Celsius
Freezing level: 600-700m

Ground Conditions Supplement

Thursday 31 March. Helvellyn summit at 1225 Full Report; There were further snow/hail showers as the Assessor left the hill and during the afternoon, so walkers out on Friday should expect to encounter more snow than described here. Fresh snow/hail has fallen in the past 24 hours virtually to valley level although it has only settled higher up. There is a skittering from 400m with the main snowline being at around 500m. It has been deposited, and subsequently blown about, on gusty northerly winds. Depth rises with height although the actual depth encountered varies from little on exposed ground to drifts in sheltered spots and hollows of 50cm (although such depth is the exception) with a very rough average of only around 4cm at 900m. The snowpack is very soft and often settled on what was dry ground and rocks. However, there were also patches of ice on rocks and paths especially across drainage lines and on popular routes were the snow had been compressed. Walkers out on Friday should expect to encounter more ice at all levels given the fact that a hard overnight frost is forecast and Cumbria is currently under a Met Office Yellow warning for ice from 9pm on Thursday until 10am on Friday. A particular hazard today on paths was isolated patches of ice hidden under fresh snow/spindrift and this could also be the case on Friday. Exposed routes above the snowline – such as Striding and Swirral Edges - require extreme care. They were in mixed condition with dry rock, soft snow covered rock and some ice. Microspikes and an ice axe are strongly recommended to negotiate such routes safely and crampons carried in case deeper ice/hard snow is encountered Conditions are now very different to last week with today's summit windchill (what the temperature feels like) around midday being minus 16 degrees C ; this is a full 20 degrees lower than last Thursday! Therefore it is essential for anyone venturing out on the fells that they have full winter clothing (waterproofs, extra warm layers, hat & gloves), mountain boots and equipment. This includes map and compass and the ability to use them in potentially poor visibility such as in low cloud and during hail/snow showers. Goggles are also recommended to lessen the sting of windblown hail/spindrift. Microspikes and walking poles are also recommended for anyone going above the snowline on Friday owing to the amount of ice that there is likely to be on paths. Temperature: minus 4.6 Deg C. Maximum wind speed 42.9 mph. Wind chill: minus 15.7 Deg C Average wind speed: 26.7
